```html
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <link rel="stylesheet" href="css/styles.css">

  <title>Pricing Landing Page</title>

</head>

<body>

  <header>

    <h1>Fictional Product/Service Pricing</h1>

  </header>

  <main>

    <section class="pricing">

      <!-- Pricing structure goes here -->

    </section>

    <section class="customization">

      <!-- Interactive elements, currency customization, etc. go here -->

    </section>

  </main>

  <footer>
```
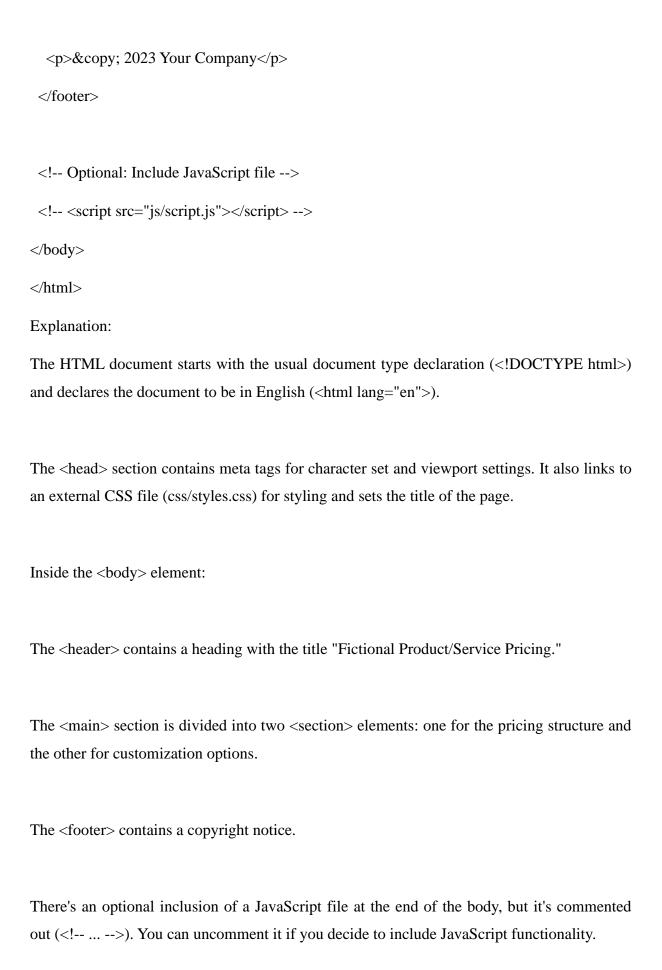

```html
    <p>&copy; 2023 Your Company</p>

  </footer>

  <!-- Optional: Include JavaScript file -->

  <!-- <script src="js/script.js"></script> -->

</body>

</html>
```

Explanation:

The HTML document starts with the usual document type declaration (<!DOCTYPE html>) and declares the document to be in English (<html lang="en">).

The <head> section contains meta tags for character set and viewport settings. It also links to an external CSS file (css/styles.css) for styling and sets the title of the page.

Inside the <body> element:

The <header> contains a heading with the title "Fictional Product/Service Pricing."

The <main> section is divided into two <section> elements: one for the pricing structure and the other for customization options.

The <footer> contains a copyright notice.

There's an optional inclusion of a JavaScript file at the end of the body, but it's commented out (<!-- ... -->). You can uncomment it if you decide to include JavaScript functionality.

CSS (styles.css):

css

Copy code

```css
/* Add your styles here */
body {
  font-family: 'Arial', sans-serif;
  margin: 0;
  padding: 0;
}

header {
  background-color: #333;
  color: #fff;
  text-align: center;
  padding: 1em 0;
}

main {
  padding: 2em;
}

.pricing {
  /* Pricing structure styles */
```

```css
}

.customization {

  /* Interactive elements, currency customization, etc. styles */

}

footer {

  background-color: #333;

  color: #fff;

  text-align: center;

  padding: 1em 0;

  position: fixed;

  bottom: 0;

  width: 100%;

}
```

Explanation:

The CSS file defines the styling for the HTML elements.

Styles are applied to the body, header, main, .pricing, .customization, and footer.

Notable styles include setting a background color, text color, padding, and positioning for the header and footer.

Placeholder comments (/* ... */) indicate where you would add specific styles for the pricing structure and customization sections.

README.md:

This file would typically contain information on how to run the project, any dependencies, and additional notes for someone reviewing your project.

documentation.docx:

This document would provide a detailed explanation of your design choices, features implemented, and any challenges faced during the development process.

Remember, this is a basic template, and you should customize and expand it based on your specific project requirements and design preferences.
